

PEBCO[®]'s Flapper/Double Flapper Valves

PEBCO[®]'s Flapper valves provide a positive seal for material handling and air-lock applications which self adjust with wear. Other features and benefits include:

- Heavy-duty construction for long lasting service with minimum maintenance required.
- Body construction of A36 carbon steel plate.
- Abrasion resistant steel (400 BHN) on blade and inlet throat seat – machined for optimum sealing.
- Full throat design with no infringement in the flow area.
- Standard design pressure ranges from -60" H₂O to +60" H₂O. (Options available for lower and higher pressure service.)
- Operating temperatures up to 500°F. (Higher temperature service is available with special materials of construction.
- All welding is per AWS standards.

PEBCO[®] is recognized world-wide as a manufacturer of powder and bulk solids equipment. Products produced range from truck, train, and shiploading equipment to gates, valves, diverters, mass flow feeders, cascade[®] chutes, dustless loading spouts, and telescopic chutes.
